

AIRBNB NEW YORK

GLOBAL MARKET EXPANSION

Sena | April 2026

EXECUTIVE SUMMARY

SITUATION

Local Law 18 (2022/2023) restricted new registrations and tightened short-term rental operations.
Post-COVID-19 Traveler behavior shifted, with safety, cleanliness, and private space becoming top priorities.
Prohibited Buildings List reduced the pool of legally available listings, particularly in high-demand central areas.

COMPLICATION

Revenue dropped significantly compared to pre-pandemic and pre-law levels.
Guest experience declined: Ratings fell noticeably in key high-demand areas (e.g., Manhattan).
Core tension: Legal supply shrank while guest expectations for quality rose sharply.

QUESTION

How can Airbnb New York **grow revenue 30%** above 2020 and **improve Guest Satisfaction (CSAT)** in core markets?

ANSWER

SUPERHOST DEVELOPMENT

Fast-Track coaching, a Host Success Hub, and exclusive perks will raise host response rates, cleanliness scores, and overall ratings.

SMART PRICING & OCCUPANCY

AI-driven pricing and Early-Bird/Last-Minute campaigns, will capture peak revenue and fill off-peak gaps.

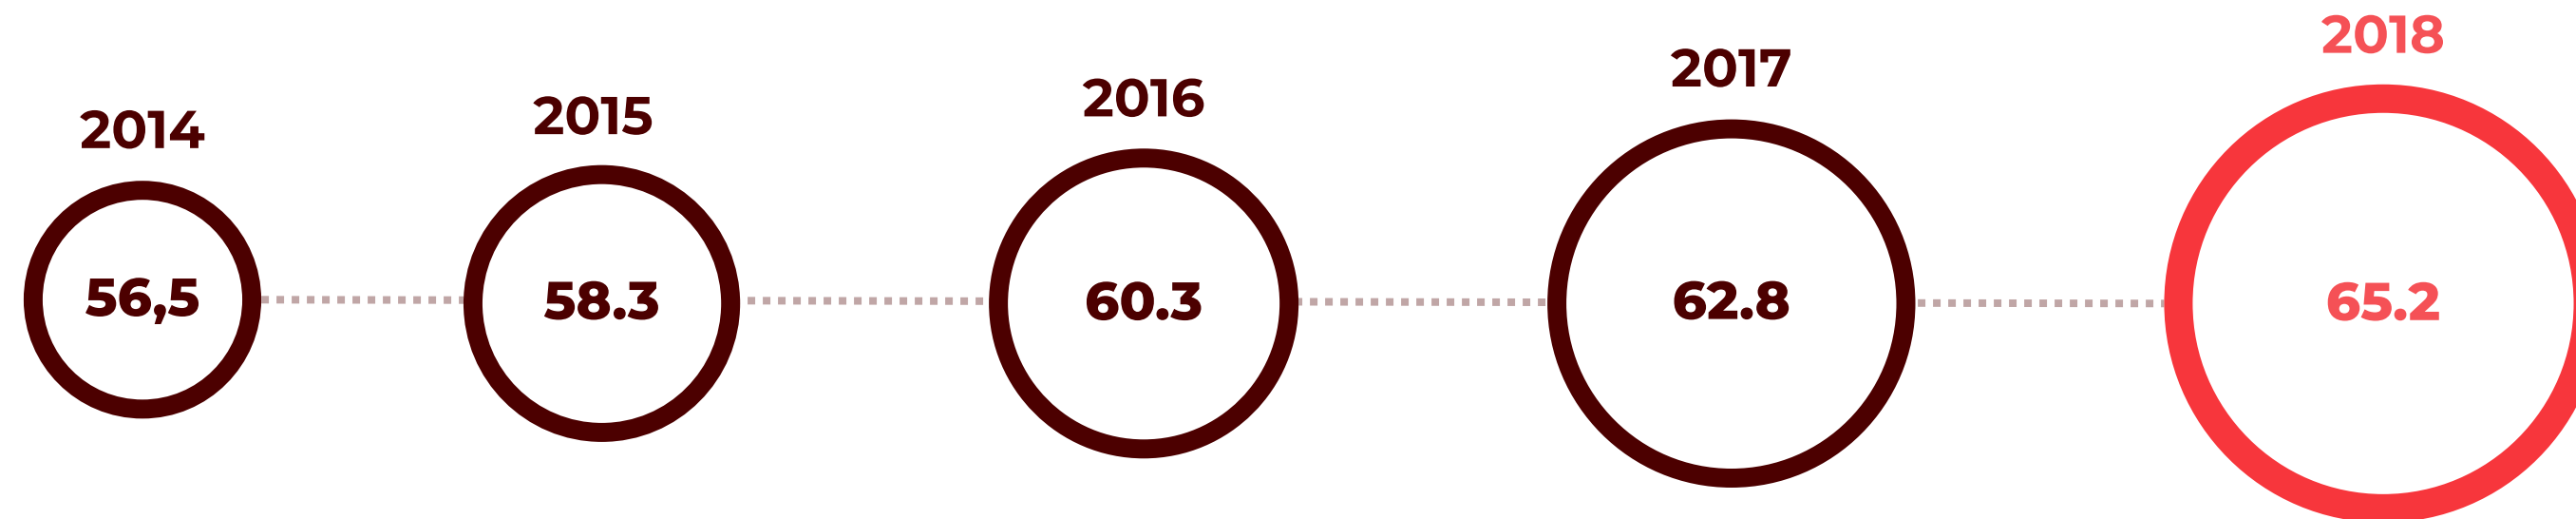

LOCAL DIFFERENTIATION

“Made in [District]” collections, and geo-targeted storytelling will redirect demand from saturated Manhattan into high-potential place.

New York City's record-breaking tourism created ideal conditions for Airbnb's expansion.

New York experienced nine consecutive years of record-breaking growth from 2010 to 2018 (million visitors).

including 51.6 million **domestic** visitors and 13.5 million **international** visitors.

International visitors make up only ~**20%** of total arrivals, but account for nearly **50% of total tourism spending**.

International traveler spends **~\$1,600 - \$2,000** per trip

> 4 TIMES

domestic visitors spend **~\$400-\$500** per trip

Tourism Growth creates “spikes” in demand for stays.

Problems & Insights

Strategies

Implementation & Risk

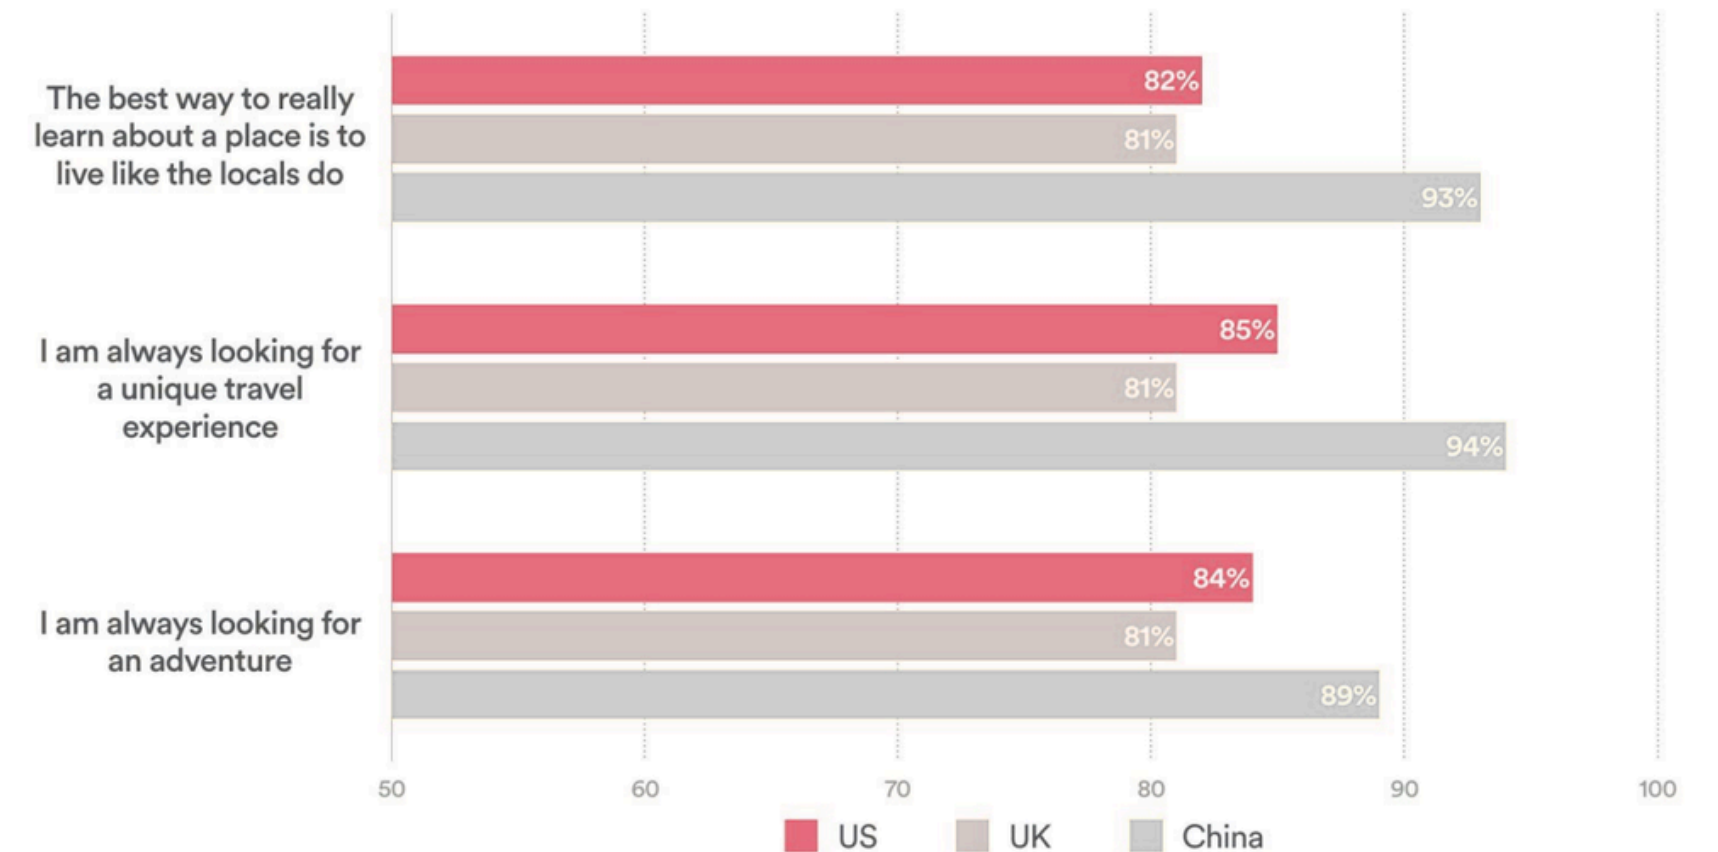

Millennials are the most travel-hungry and trend-savvy group.

Travel is Millennials' top priority,
which is higher than buying a home or paying off debt

**Travelers (Millennials) don't just want a place to stay,
but want a life-like experience in every moment**

Percent of millennials surveyed who said they agree with the following statements:

More than 80% of Millennials actively look for travel experiences that are **new, distinctive, and truly local.**

They also believe the best way to understand a place
is to live like a local.

Source: Airbnb Report (11/2016)

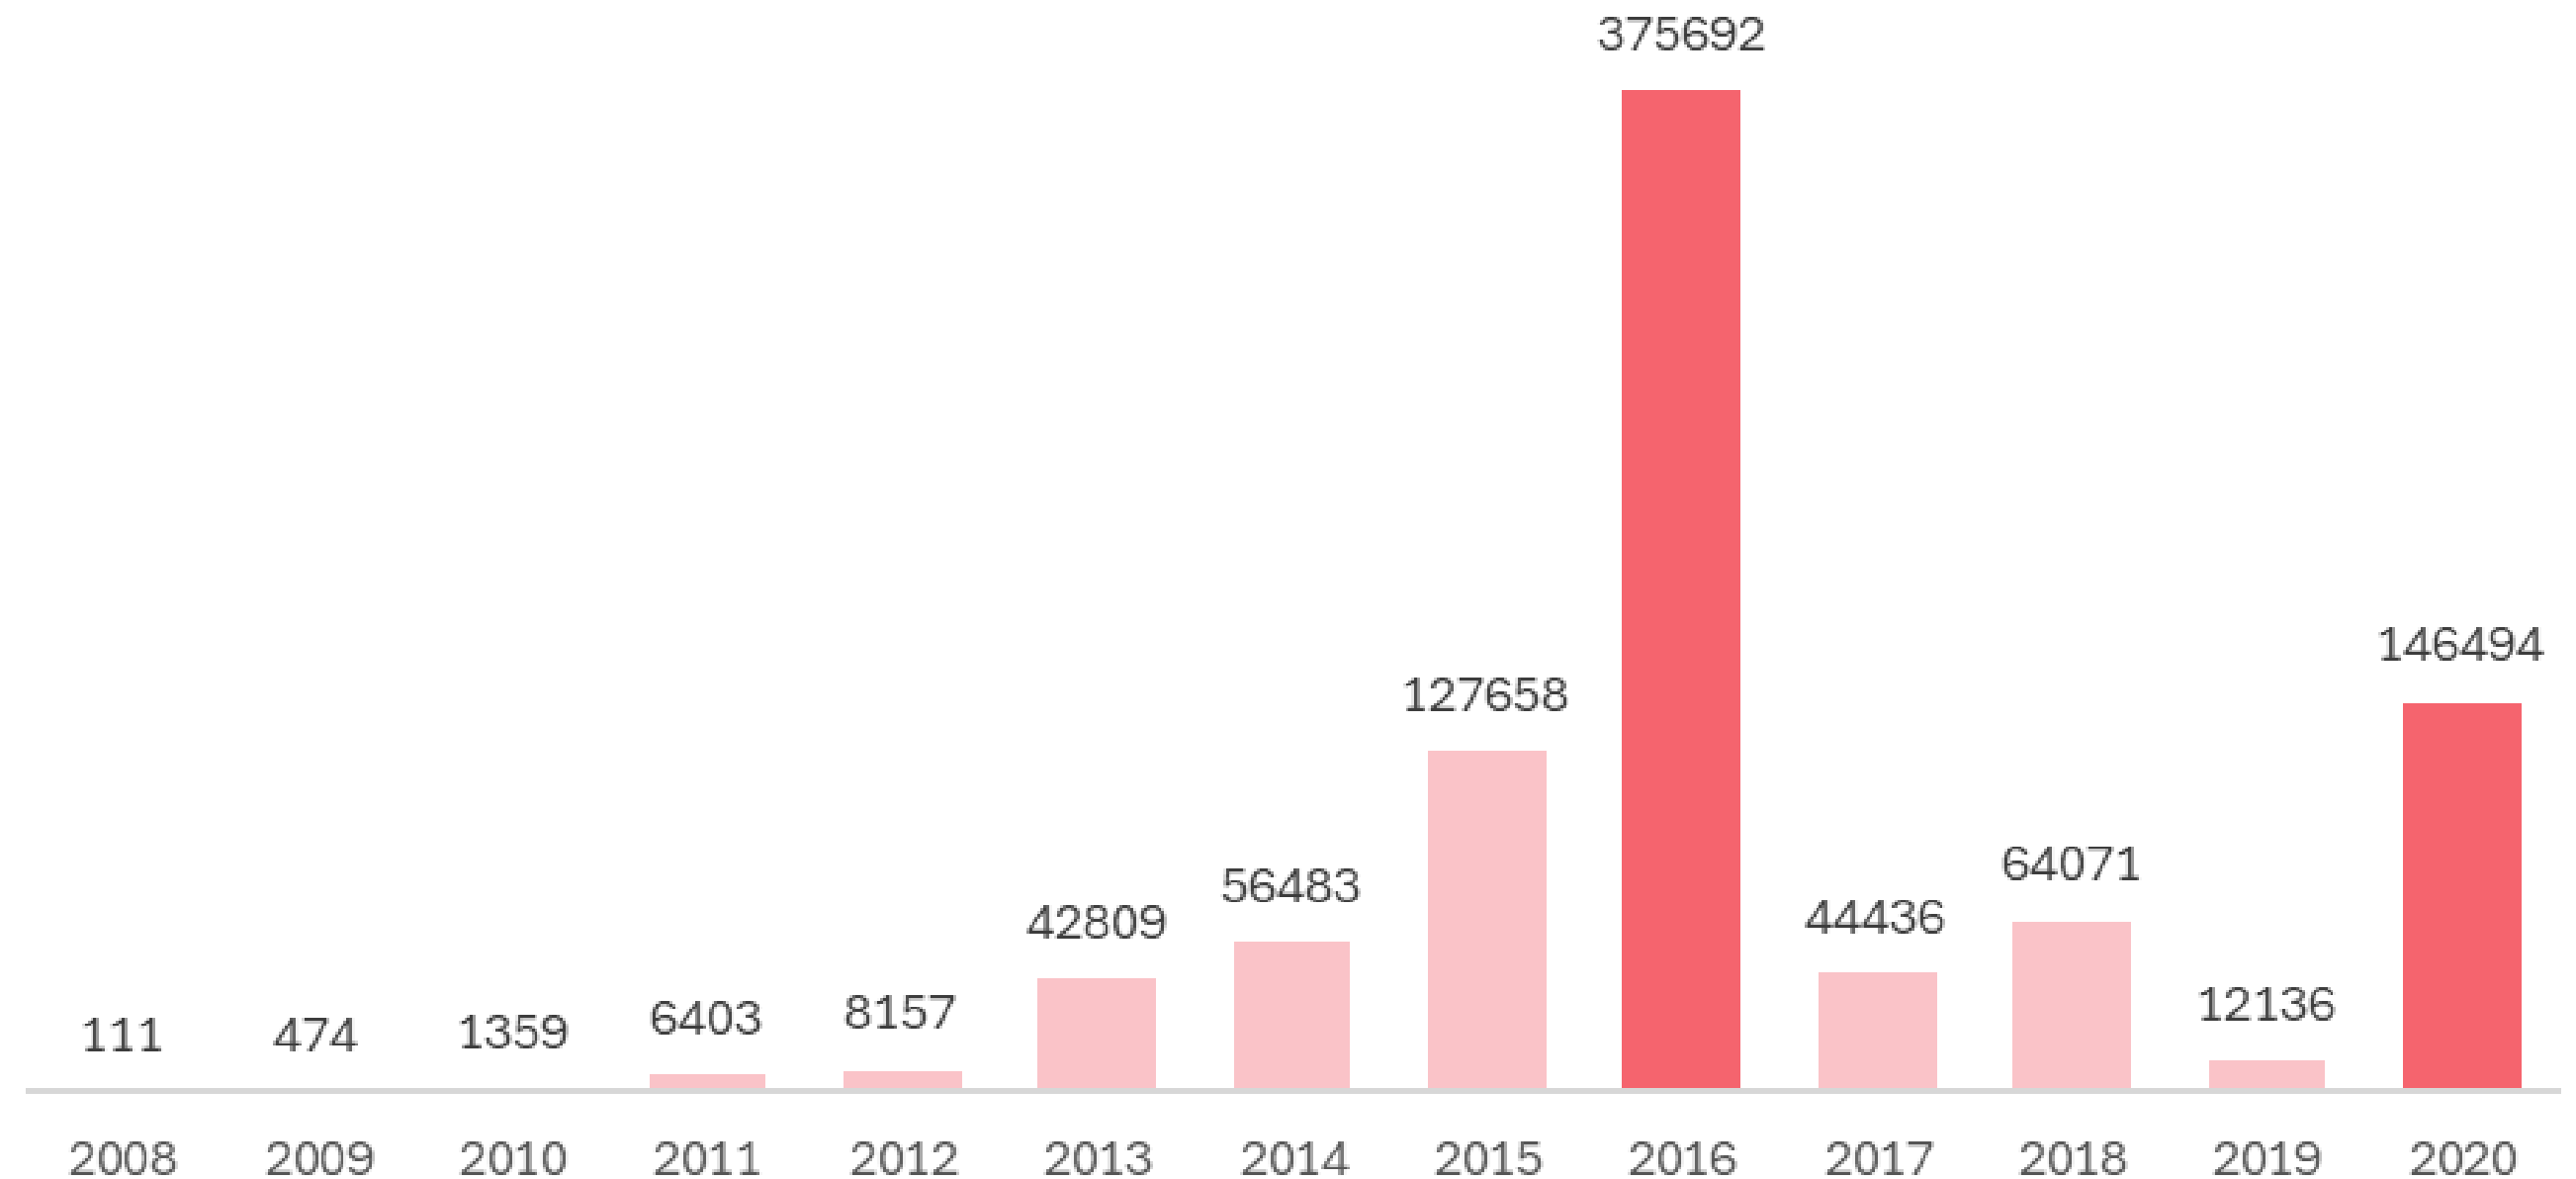

...HOWEVER

The actual number of Airbnb guests has fluctuated significantly

-

and has even dropped sharply in the strong demand periods.

Trends in the number of listings from 2008 to 2020.

Facing strong travel demand and matching customer preferences, Airbnb significantly increased its number of listings, especially in 2016.

**...However, it couldn't sustain its growth.
Listings fell sharply in 2017 - 2019, even as demand peaked**

Behind this contradiction are **TWO** main groups of causes...

External Shock

- **The COVID-19** pandemic delivered a severe financial blow and partly changed guest priorities
- **Local Law 18** - strict regulations to control short-term rentals
- **Intense competitive pressure** and lobbying efforts from the hotel industry.

CAN NOT CHANGE the situation
Airbnb needs to stay flexible and adapt.

Internal Problems

- **Host service quality** is not keeping up with current demand: response times are slow, and cleanliness ratings remain low.
- **Price** is not flexible across seasons, it does not adapt well to fluctuations in demand.
- **Locations** are not being fully optimized, the potential of some areas is still underutilized.

CAN BE ADDRESSED AND BECOME
an opportunity to create a strong USP
to win back.

Dive deeper into INTERNAL PROBLEMS to identify the most effective path forward...

Service quality is falling behind demand with declining cleanliness ratings and slow response times...

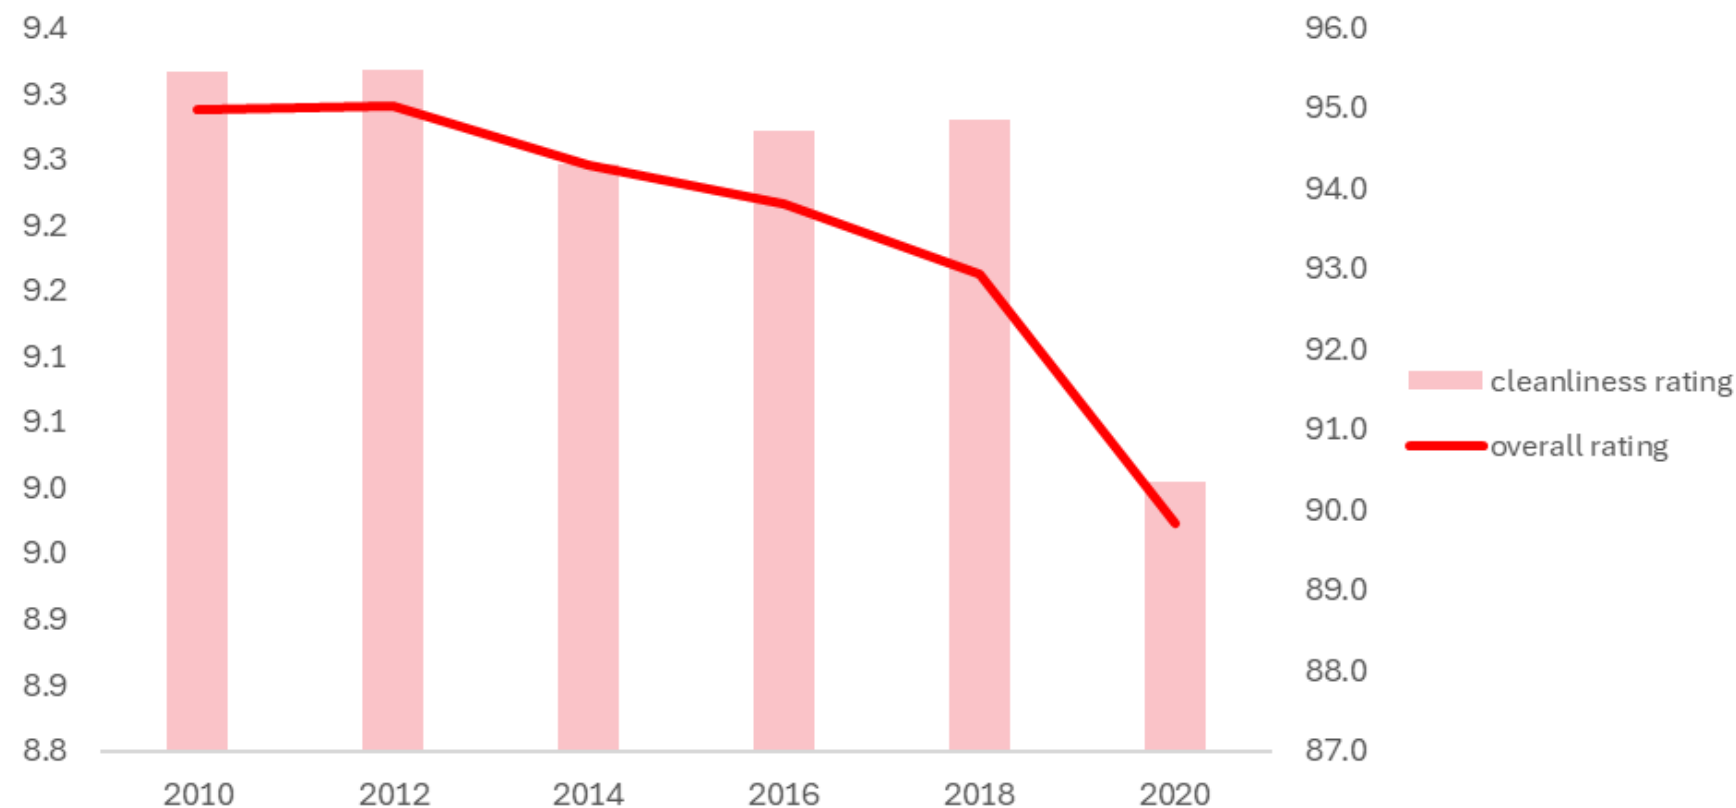

81% of guests consider cleanliness the top deciding factor

BUT

Responding within 1 hour can **increase** conversion rates by up to **25%**

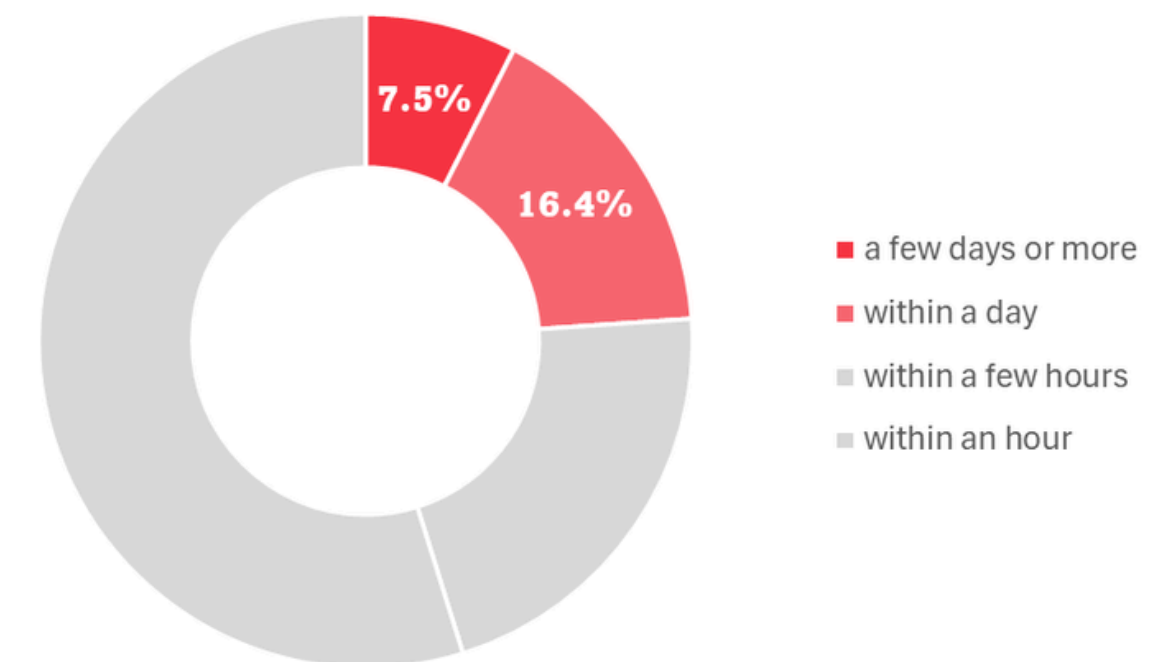

Airbnb's cleanliness ratings have declined significantly, dragging down overall ratings and lowering conversion rates.

Only 30% of listings have **Instant Book** enabled. Response times remain slow, with **1 in 4 guests** waiting more than 24 hours for a reply

Source: Enso Connect, The hospitable Research

Response Time Rate

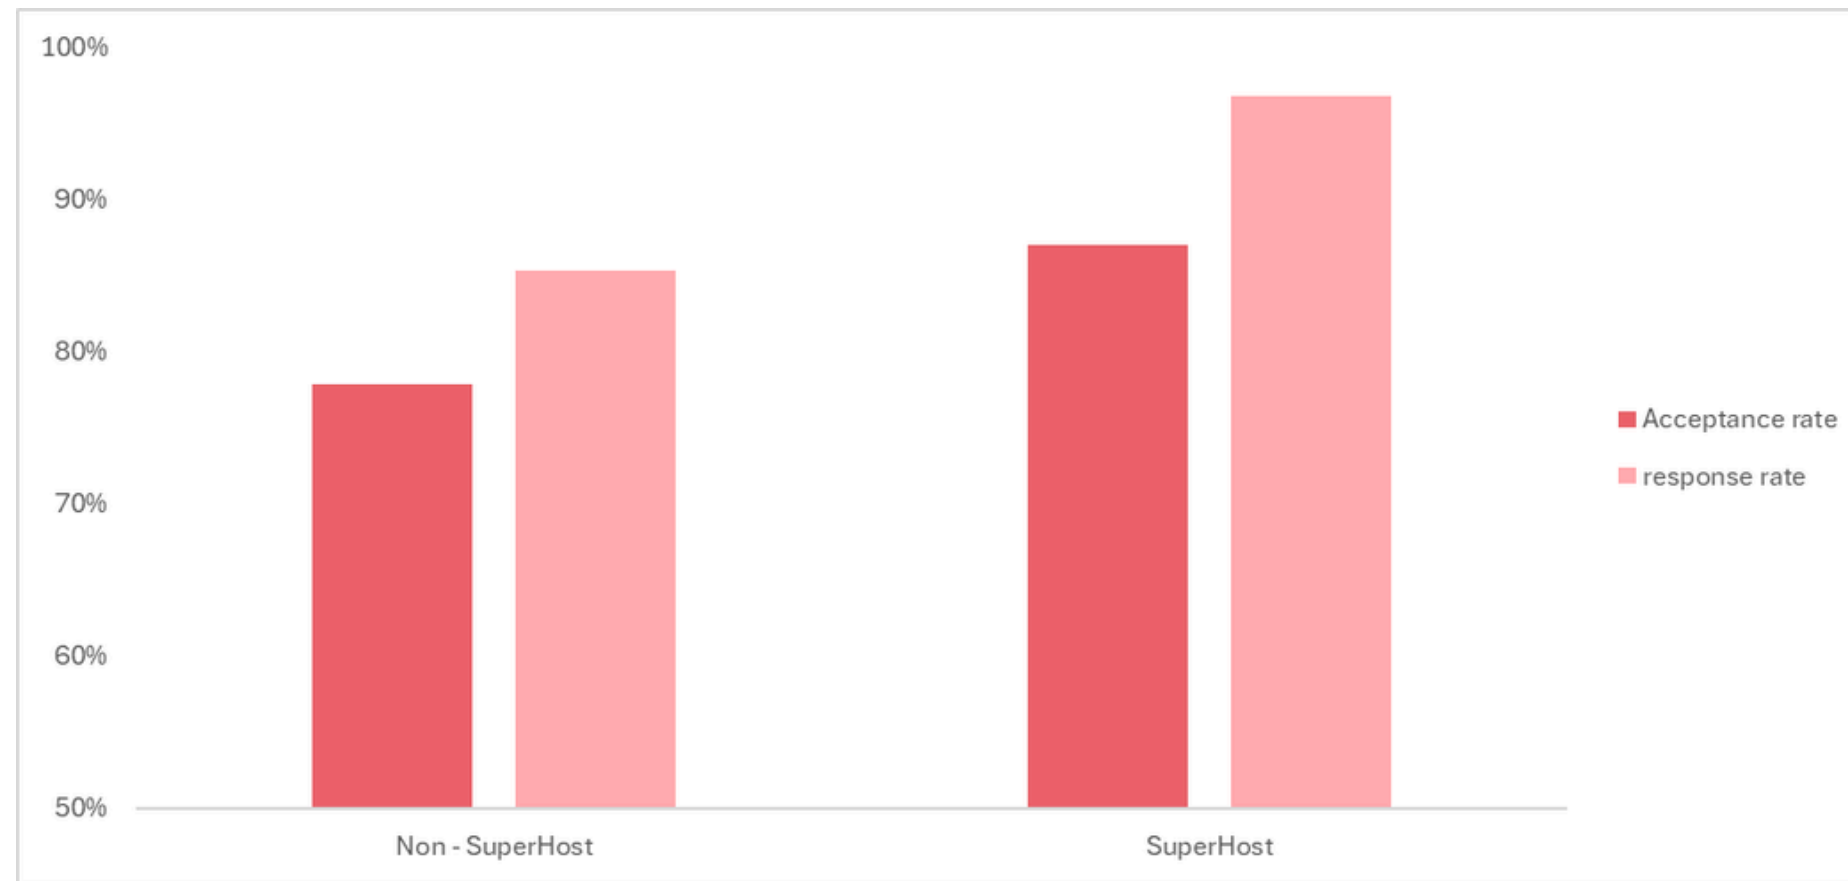

Problems & Insights

Strategies

Implementation & Risk

...Host engagement remains passive.

59% of guests Trust **SUPERHOSTS** more

SUPERHOSTS

have **10%** higher acceptance and response rates
earn **60%** higher income than non-superhosts

Only **19%** of listings qualify as Superhosts,
meaning **>80%** of the market consists of regular hosts, creating a risk of **inconsistent customer experience**
and a low Superhost rate indicates a hosting community that is **not fully engaged or well-equipped**.

Source: Enso Connect, The hospitable Research, Airbnb NewYork Dataset

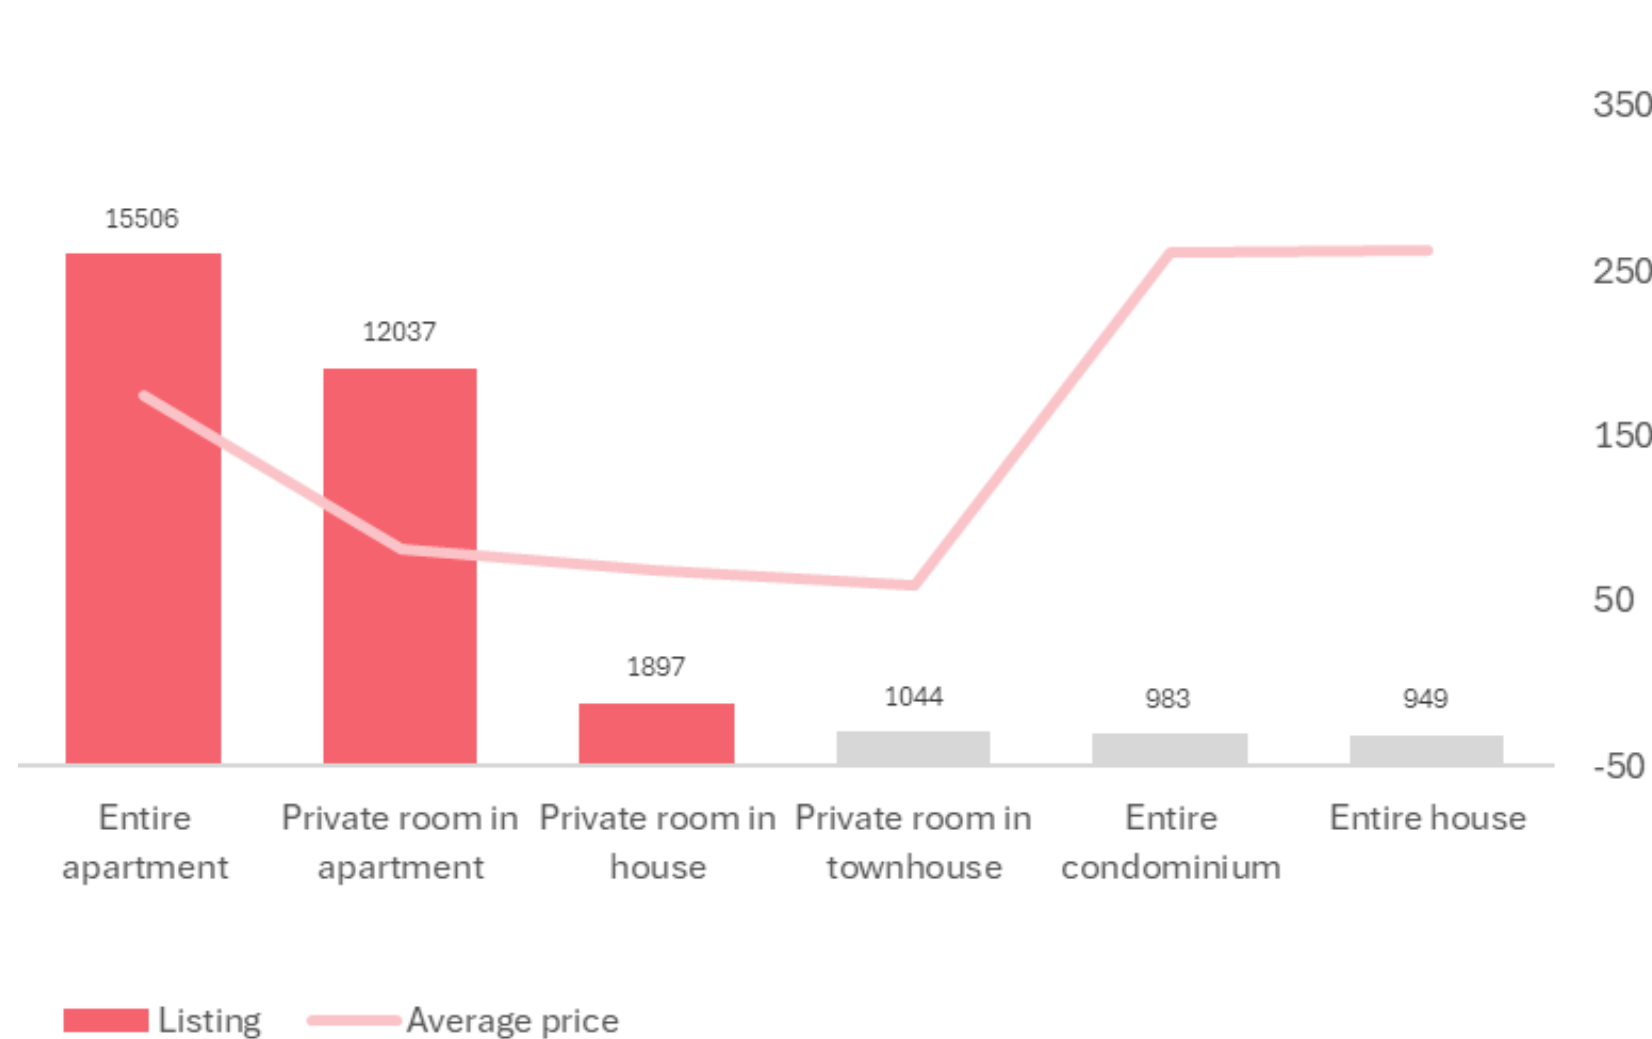

Problems & Insights

Strategies

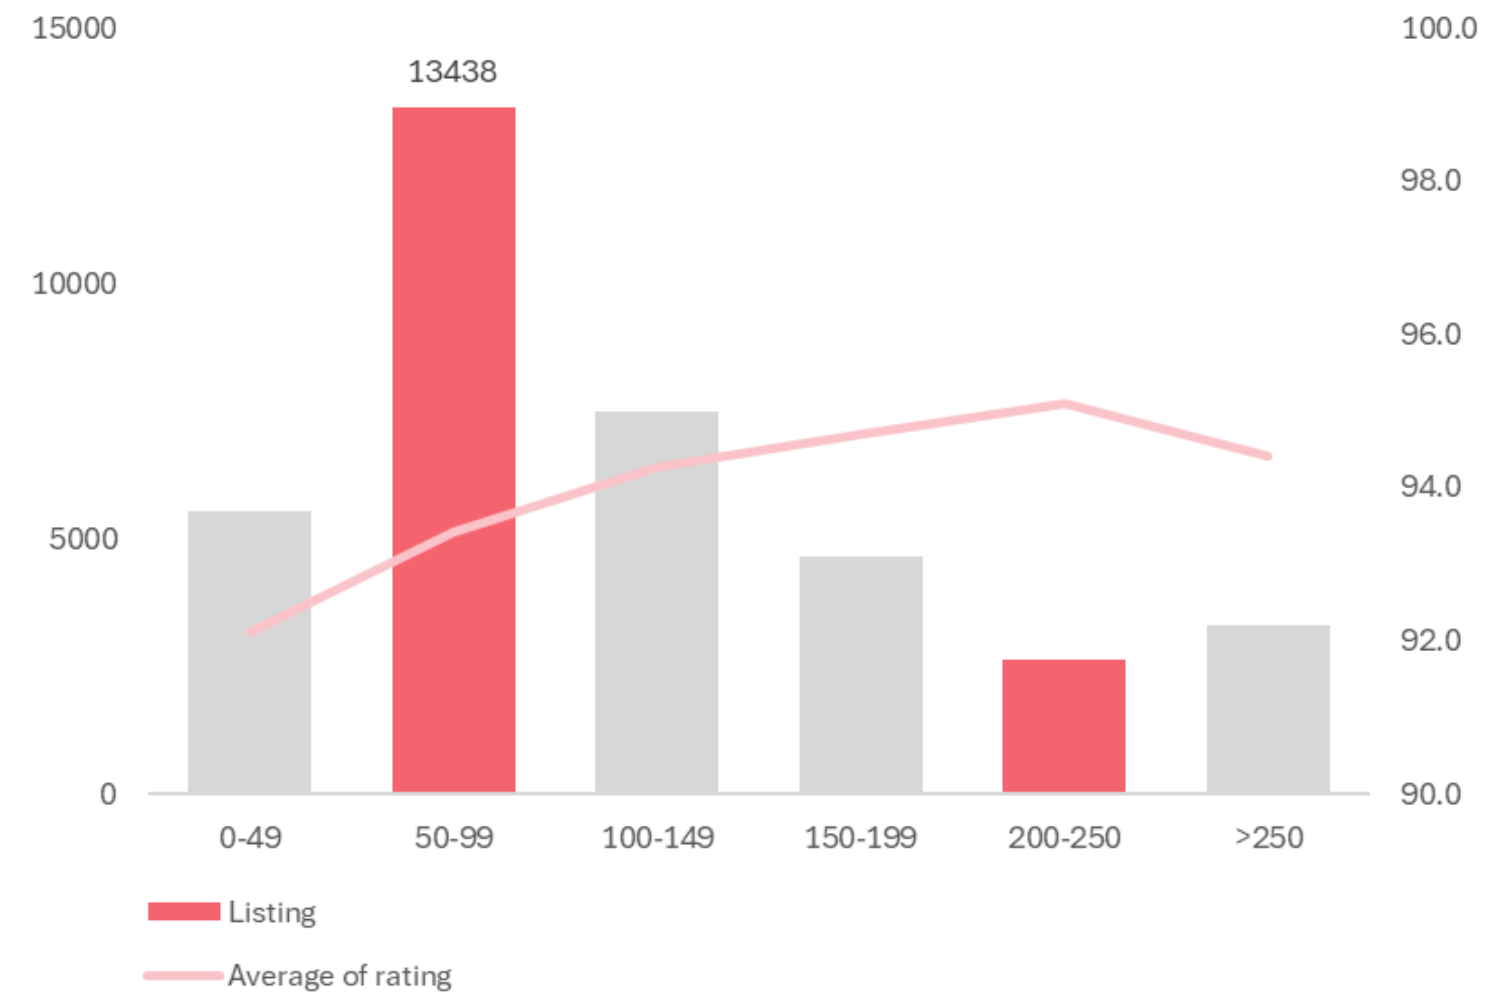

Implementation & Risk

Airbnb pricing is highly segmented...

High-value listings deliver **superior occupancy** and **revenue** driven by fully equipped listings and peak demand periods (e.g., tourism, festivals).

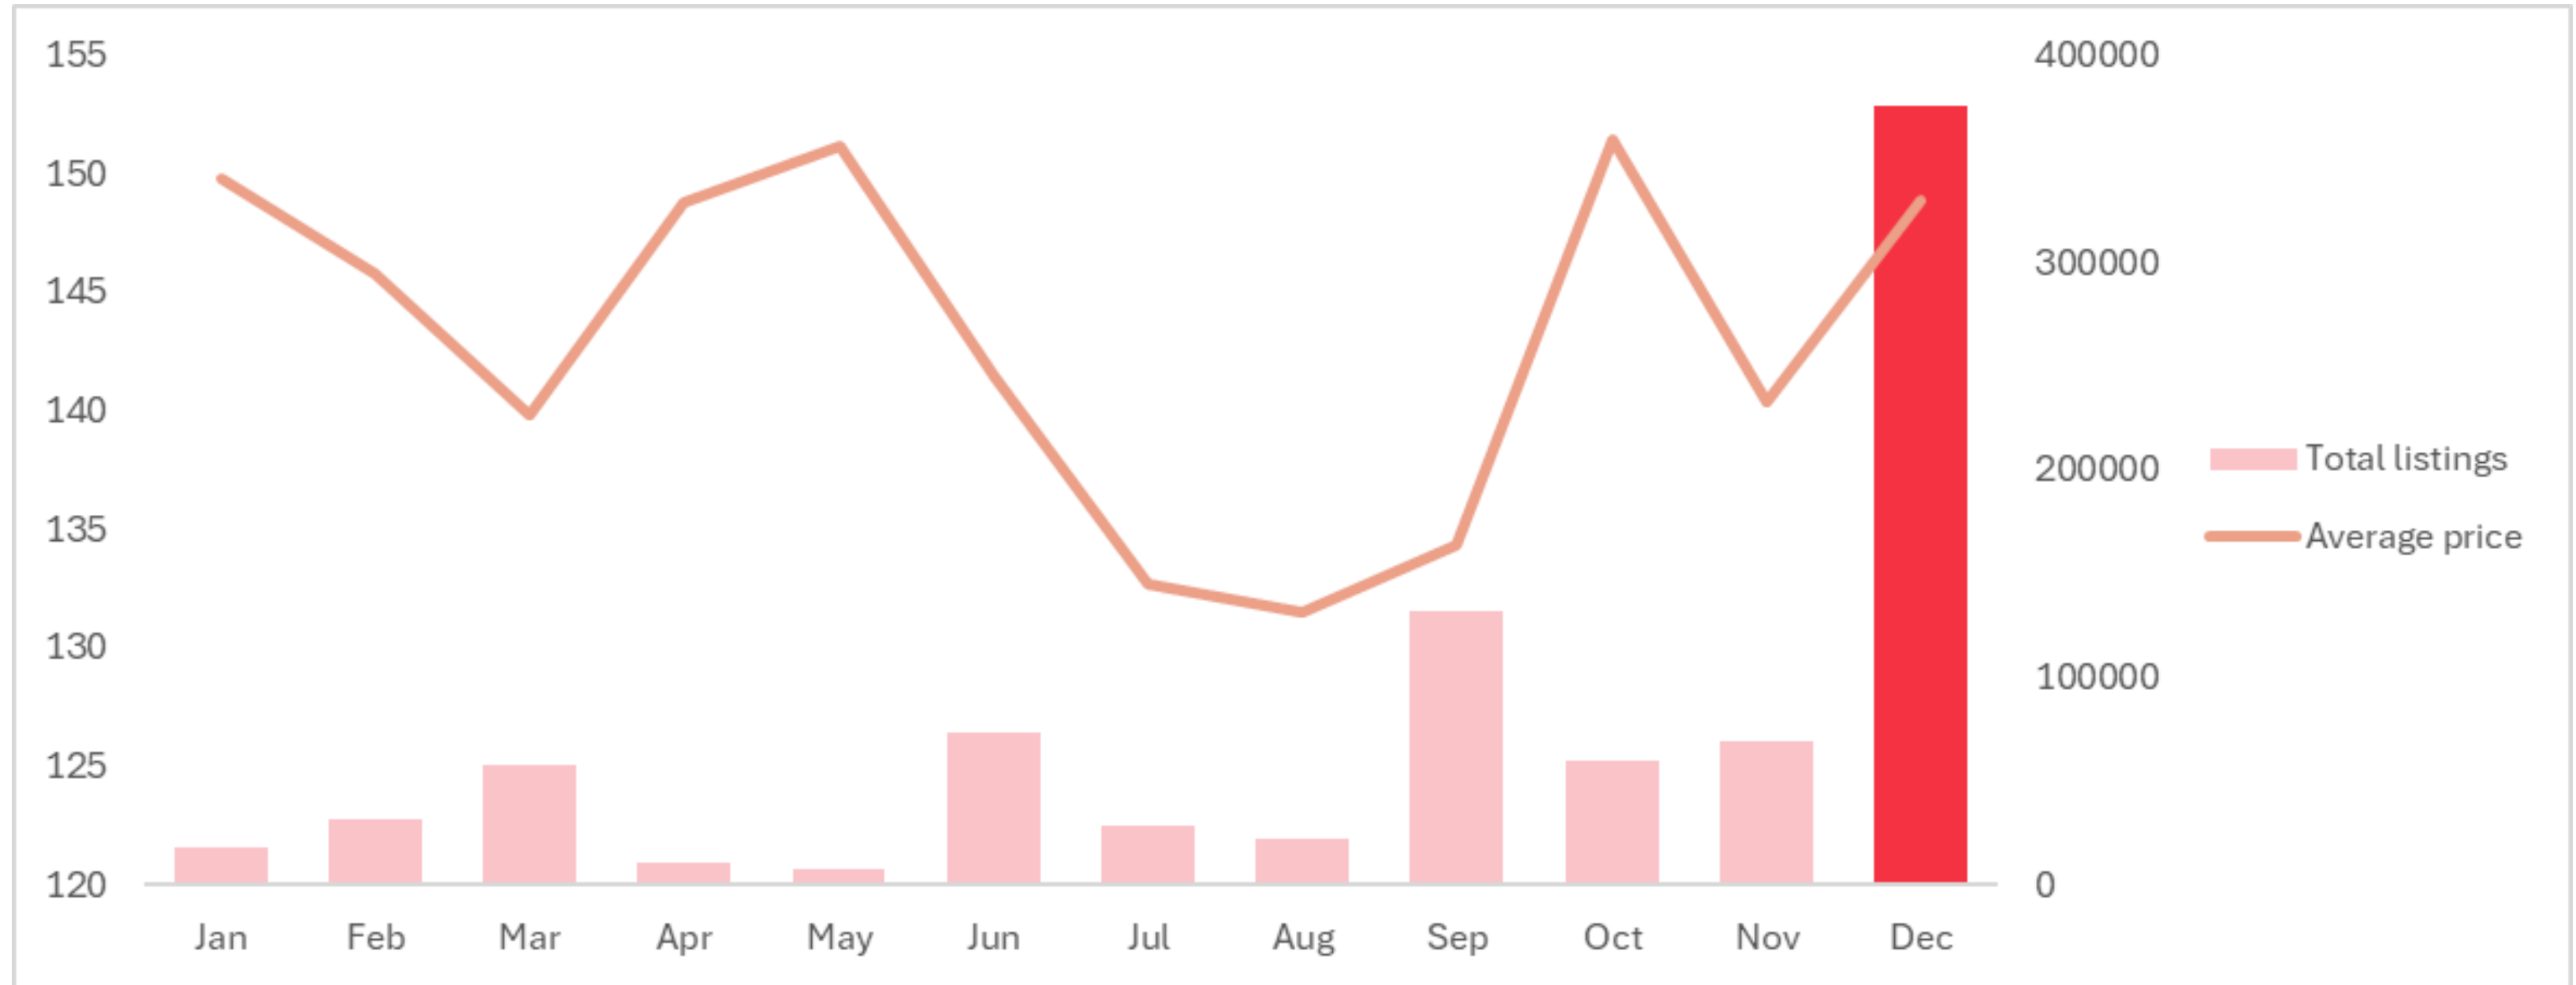

In contrast, the low-price segment underperforms **Heavy discounting does not** create a **competitive advantage**, and hurt brand value and profitability.

Source: Airbnb NewYork Dataset

**...But PRICE is not flexible across seasons
it does not adapt well to fluctuations in demand.**

During festive seasons, customers are willing to pay more and have more options, ...but Airbnb is not fully capturing this trend.

Source: Airbnb NewYork Dataset

Problems & Insights

Strategies

Implementation & Risk

Over-concentration in central districts has left a unique point and potential of other districts largely untapped.

Manhattan wins on **location**

but scores **lowest on service quality**

Brooklyn performs well across all key metrics
and shows **strong growth potential**.

Staten Island offers **affordable** prices and **high quality**
but visitor **volume remains small**.

Manhattan - hosts must improve **service quality**

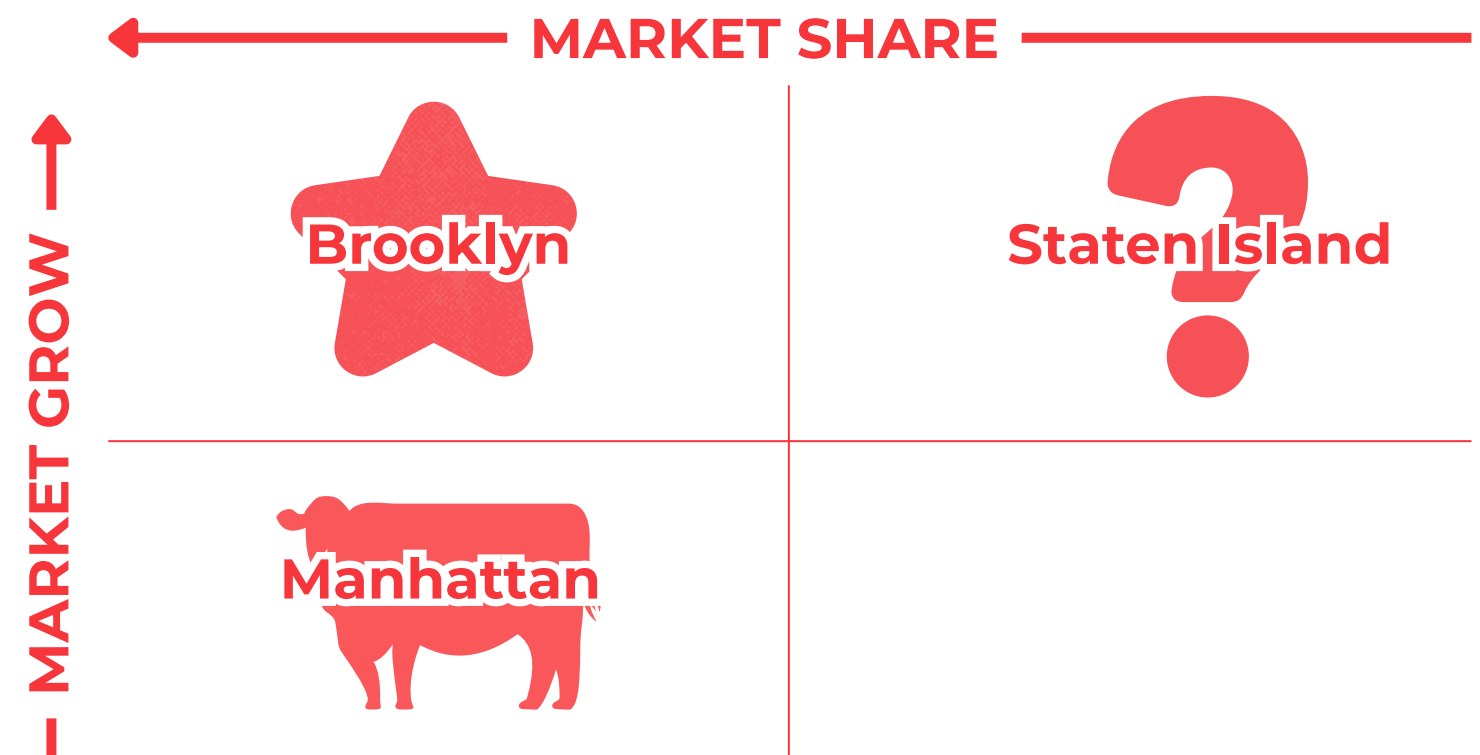

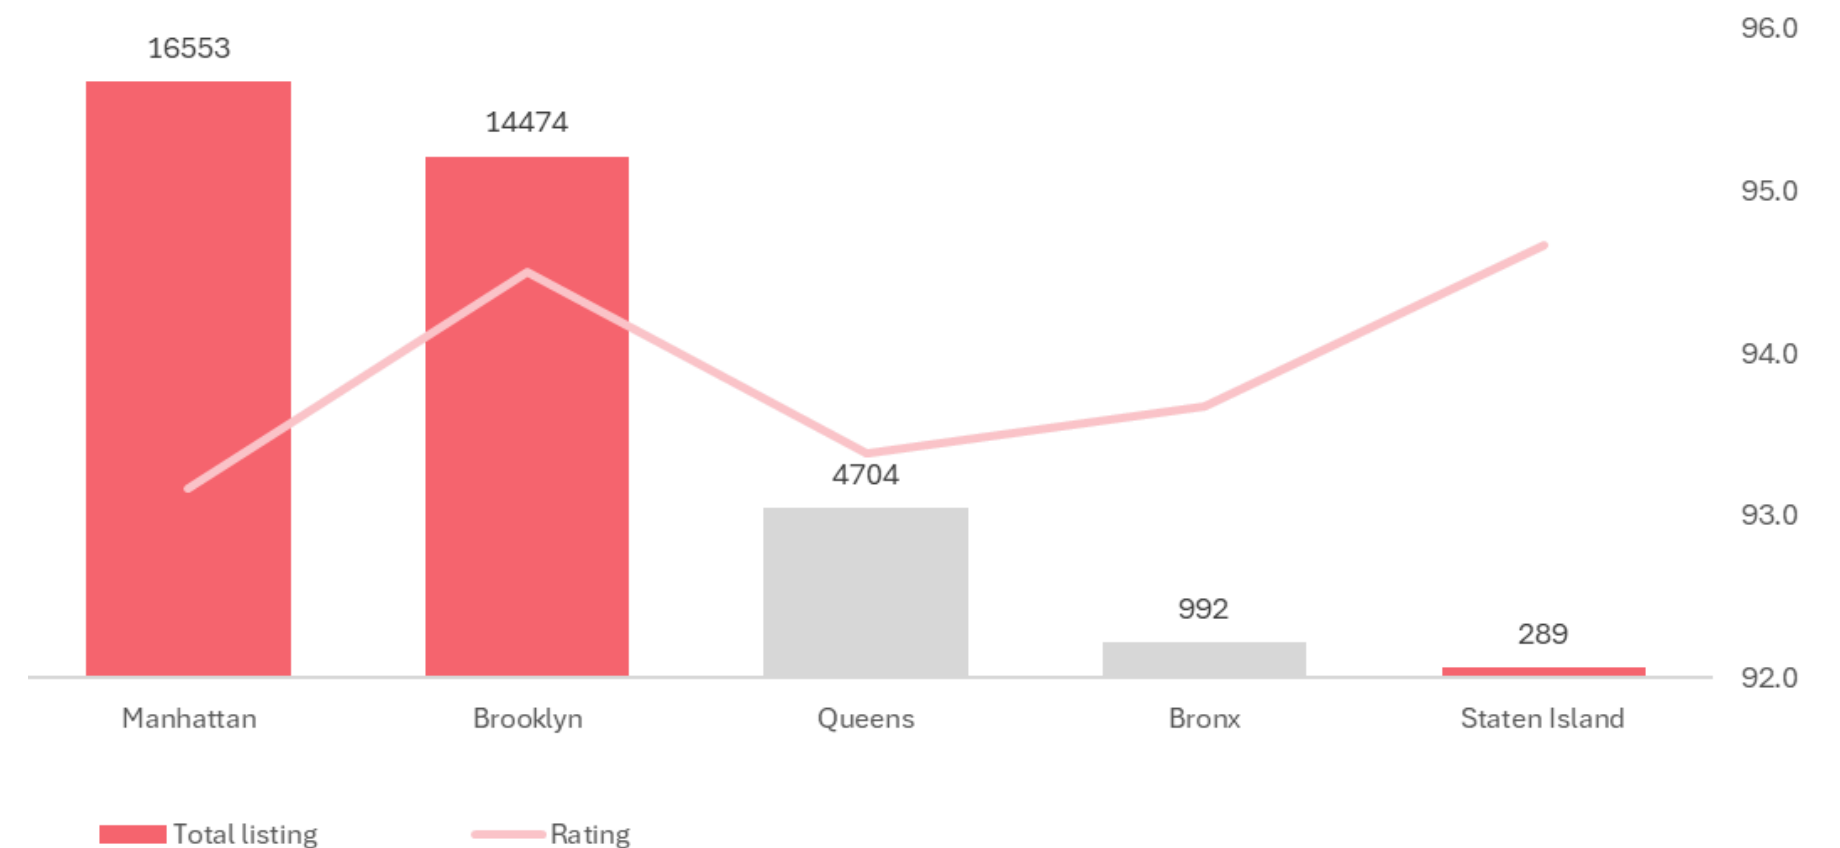

Location alone is no longer enough to **sustain premium pricing**

Brooklyn is the clear **growth priority**

Invest here to capture **rising demand** and **drive market share**.

Staten Island - pilot a **targeted supply** push to test
if demand can scale.

Problems & Insights

Strategies

Implementation & Risk

Airbnb still has a strong advantage in delivering emotional connection and unique stays.

BUT

Airbnb is gradually losing its core advantage: “living like a local.”

Do not investing enough in service and host quality

lacking a seasonal, segmented pricing strategy

Not yet fully leveraging each district’s **strengths**

These have turned many listings into “**hotel-like rooms without service,**” opening the door for boutique hotels and full-service competitors.

**NOW AIRBNB MAINLY PROVIDES ACCOMMODATION ONLY
IT HAS NOT FULLY LEVERAGED ITS AIRBNB EXPERIENCES ECOSYSTEM
TO CREATE CLEARER DIFFERENTIATION.**

NEEDS

Scale **Superhosts** and build effective **management** of host performance
Partner more effectively with hosts to upgrade local experiences

Get ahead of **seasonal travel demand** by optimizing pricing tools to boost guest **decision-making**

Unlock **potential neighborhoods**
Use **targeted marketing** based on each district’s strengths to break old travel patterns and **personalize experiences**

#1 RAISING HOST QUALITY IS THE FASTEST LEVER TO IMPROVE GUEST SATISFACTION.

Strategic Pillar 1: Superhost Development

OBJECTIVE

Increase bookings for listings integrated with "Local Experiences" by 15% within 9 months

APPROACH

Fast Track to Superhost	Host Success Hub	Exclusive Superhost Perks
Target high-potential Hosts who have good room quality, but have low booking volume, inconsistent response times, and ratings are not high Offer a free 1-on-1 coaching package. Training focuses on: • Professional real-estate photography • Listing description optimization tips • Guest communication skills to achieve > 90% response rate and >95 overall ratings	Online resource center: video guides message templates, peer forum 	Partner with local cleaning, maintenance, and photography services to offer discounted packages to Superhosts 

IMPACT

Accelerates quality improvement at lowest cost	Scales coaching builds host community & retention	Reduces operating costs incentivizes quality maintenance
--	---	--

#2 SMART PRICING AND FLEXIBLE STAY POLICIES UNLOCK REVENUE IN BOTH PEAK AND OFF-PEAK SEASONS.

Strategic Pillar 2: Pricing Optimization & Occupancy

OBJECTIVE

Increase off-peak occupancy by 10–15% and grow RevPAR by 8% through pricing initiatives.

Smart Pricing tool rollout

Early Bird & Last Minute

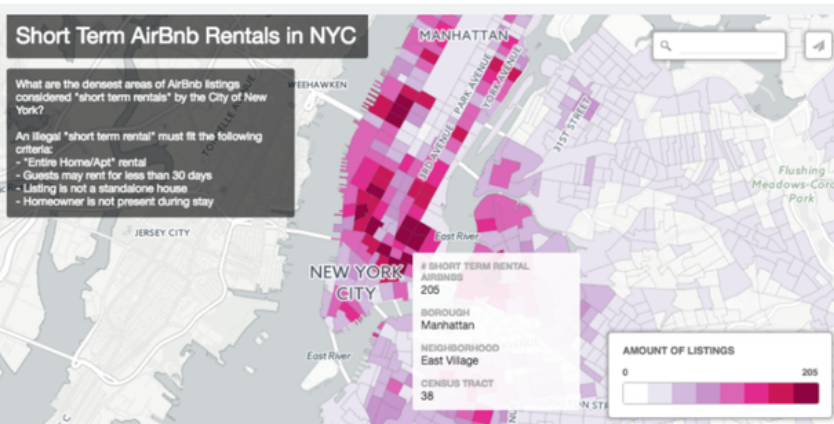

APPROACH

Optimize the pricing algorithm, update rates based on market conditions (low vs. high season)

Use **AI** plus the **user’s schedule** to match and recommend the best location faster

Early Bird: attractive discounts for bookings made well ahead of peak season (steady cash flow, demand predictability)

Last Minute: enable hosts to offer up to 15% off for bookings within 7 days to fill unsold nights, especially in low season.

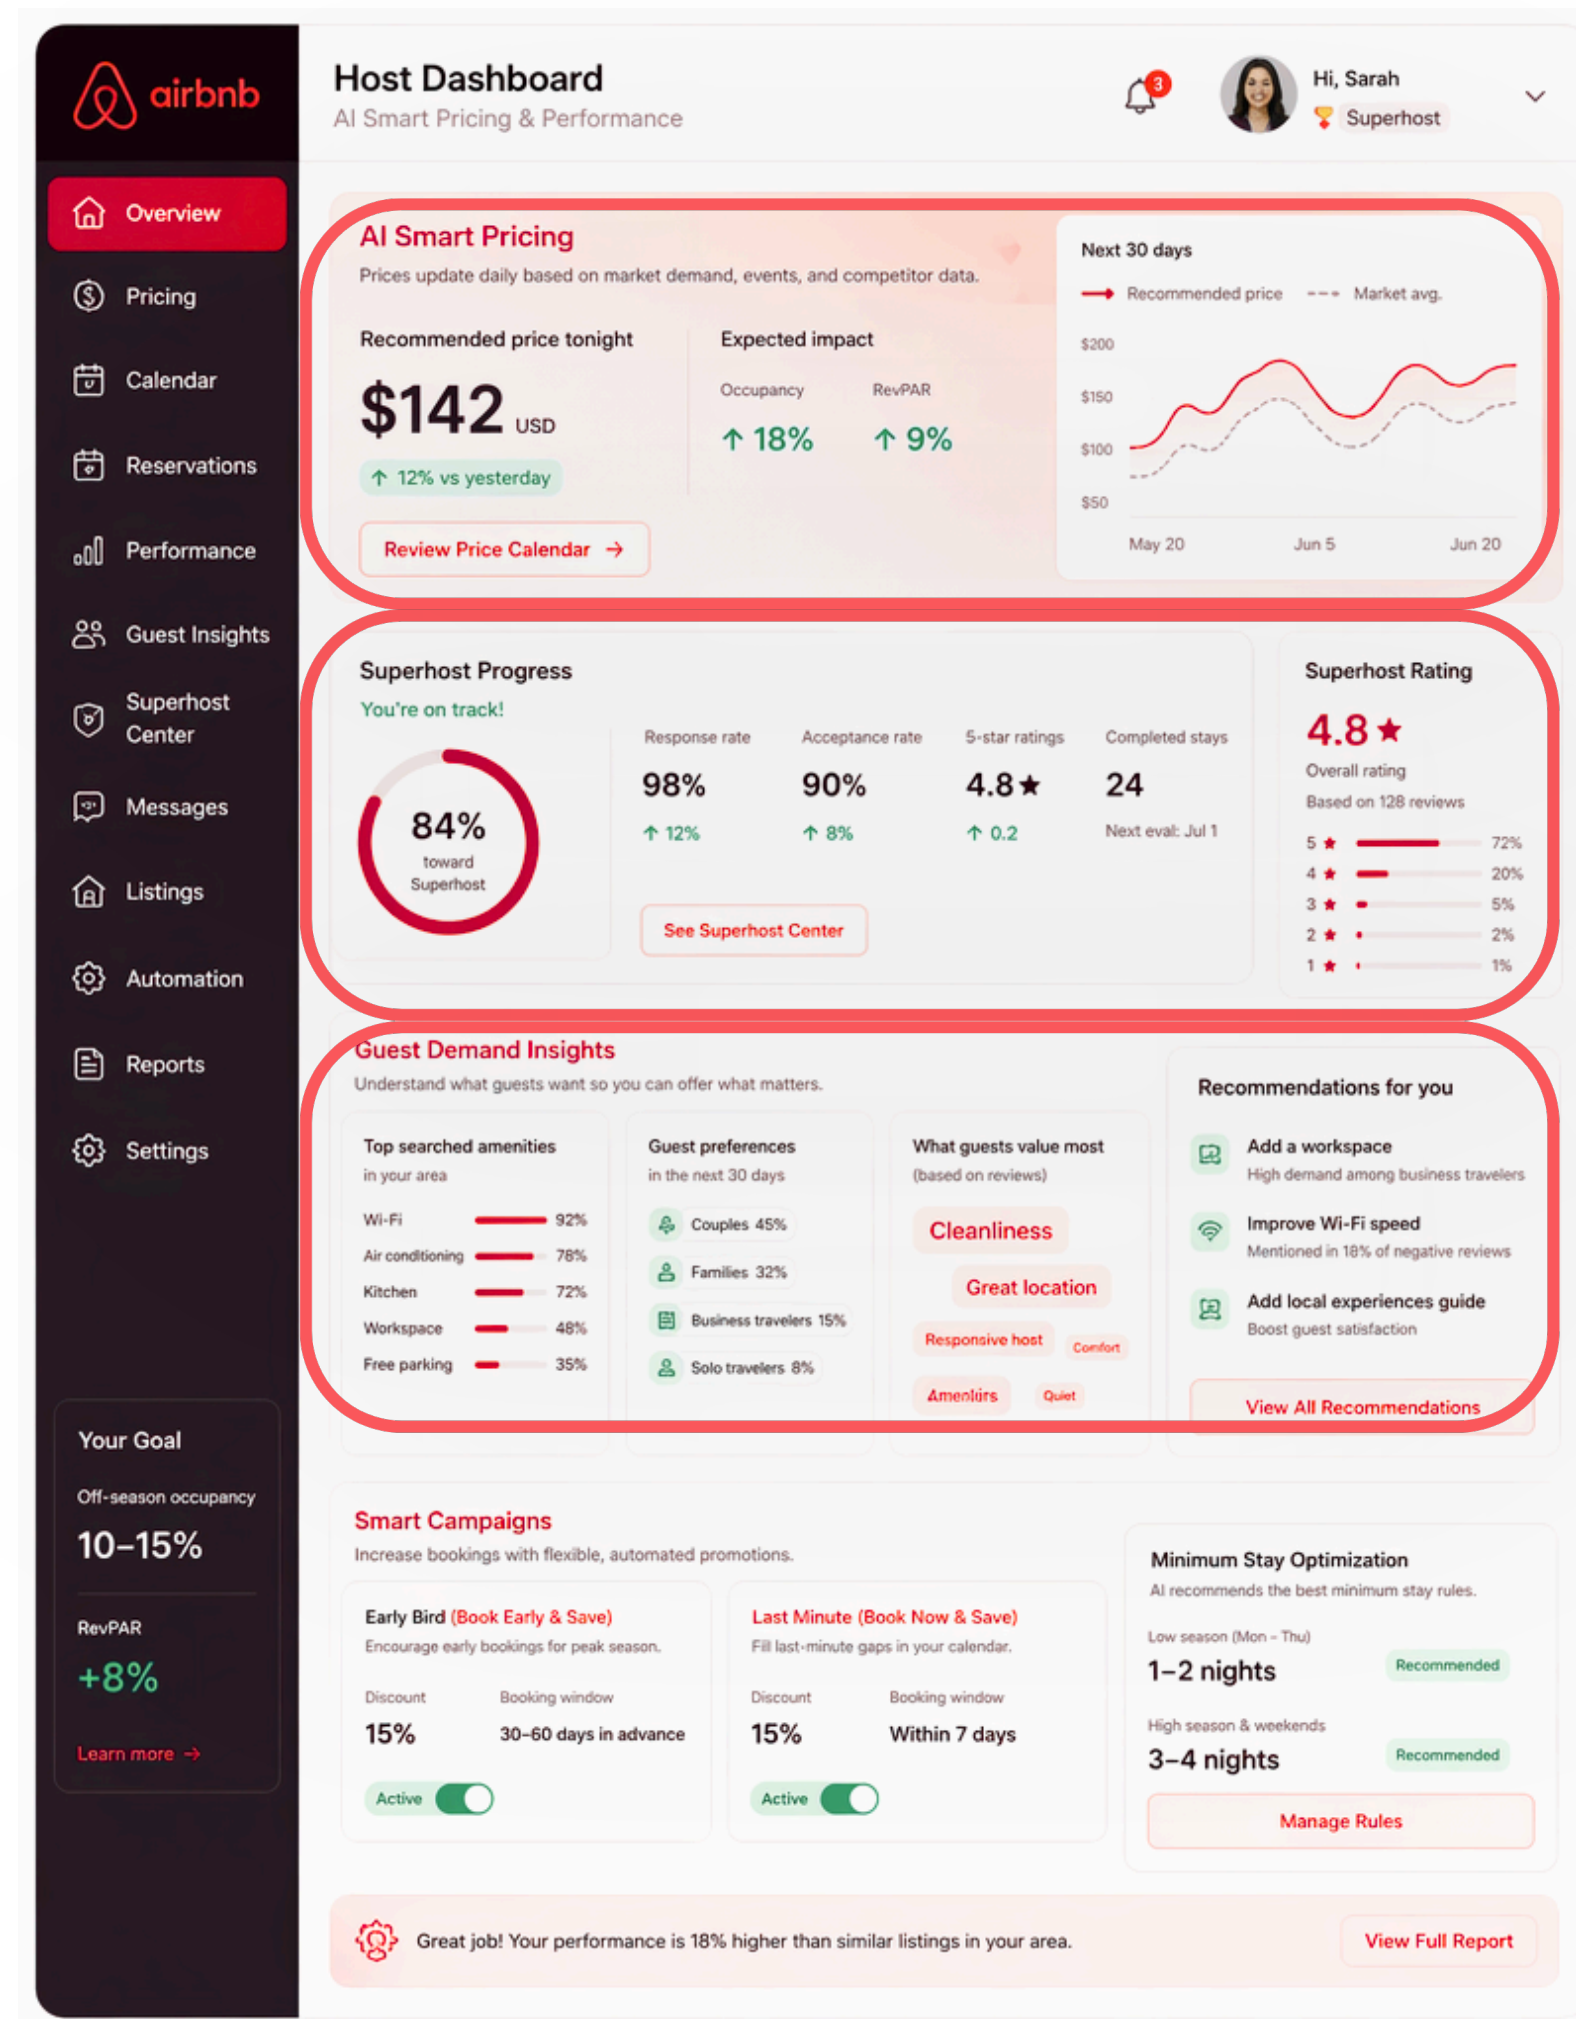

IMPACT

Book quicker and increase the time-to-decision efficiency

Stable host cash flow
Fills empty nights even in low season

AI-POWERED PRICING & HOST PERFORMANCE OPTIMIZATION HELP MAXIMIZE REVENUE AND QUALITY.

Dynamically adjust pricing

Superhost ratings tracking

Align services
with real-time guest
demand

#3 LOCAL DIFFERENTIATION CREATES DEFENSIBLE VALUE THAT REGULATIONS CANNOT ERODE.

Strategic Pillar 3: Local Differentiation

OBJECTIVE

Increase bookings for listings integrated with "Local Experiences" by 15% within 9 months.

Curate "Made in [DISTRICT]" collection

Social media

APPROACH

Handpick listings act as gateways to local culture.
Hosts offer **an exclusive "Pocket Guide"**
(favorite eateries, hidden gems, cultural events)
or **a free micro-experience**
(e.g., self-guided neighborhood walking map)

Use Airbnb's channels to tell **host** and **community stories**,
emphasizing the human and **cultural** elements
that hotels cannot replicate.

Run **paid-social and programmatic display campaigns** geo-targeted at
high-intent travelers searching
"NYC off the beaten path"
or *"best local NYC neighborhoods."*

IMPACT

Differentiates from hotels
Attracts culture-seeking travelers

Redirects organic demand from saturated Manhattan zones to growth districts

EXAMPLE _ RED HOOK

Red Hook is NYC's #1 coolest neighborhood in 2025

Brooklyn's waterfront village, where cobblestone streets, working piers, and warehouse art galleries create the NYC you didn't know existed

**"A seaside village in Brooklyn, just 10 minutes from Lower Manhattan"
close enough, yet feels worlds away**

SOCIAL MARKETING

Run paid social campaign targeting "NYC off the beaten path"

Lifestyle creators for "48 Hours in Red Hook" content series

IMPLEMENTATION PLAN

	Phase 1			Phase 2			Phase 3					
	Month 1	Month 2	Month 3	Month 4	Month 5	Month 6	Month 7	Month 8	Month 9	Month 10	Month 11	Month 12
Segment high-potential hosts

Pillar 1: Superhost Development

Pillar 2: Pricing Optimization

Pillar 3: Local Differentiation

Critical risks across all pillars are host adoption, listing quality, community acceptance, and cross-team coordination...

Risk	Impact	Mitigation
Low host uptake of Fast Track coaching Target 200 hosts may not enroll if incentives are unclear or hosts lack time	High	Offer free professional photography for first 50 enrollees; use personalized outreach with projected revenue uplift to drive sign-ups
"Made in [District]" supply gap - 50 curated listings unachievable if quality inventory is missing in target neighborhoods	High	Audit listings before launch; run Superhost coaching in parallel to build pipeline ahead of marketing push
Community backlash in expansion districts Residents may see neighborhood marketing as overtourism, triggering negative press or new restrictions	High	Co-brand content with local nonprofits/small businesses; embed community benefit messaging in all paid ads
Cross-pillar execution complexity Six teams running parallel workstreams risk delays and diluted accountability	Med	Appoint an integration lead; weekly cross-team standup; shared KPI dashboard with phased milestones
Partner network quality inconsistency - Local cleaning, maintenance, and photography partners may deliver uneven service, undermining Superhost perks	Med	Vet partners with mystery shopping before contract; build host feedback loop into the Host Success Hub
